

WHAT IS CLAIMED IS

5

1. A retransmission control method for a
multicast information distribution service which
distributes multicast information with respect to a
plurality of wireless terminals within a service
10 area from an information distribution apparatus via
a wireless region, comprising the steps of:

(a) transmitting a retransmission request for
information which requires retransmission, from an
arbitrary wireless terminal to the information
15 distribution apparatus, at a timing determined by
the wireless terminal when the information which
requires retransmission is generated;

(b) after receiving the retransmission request
for the information from the arbitrary wireless
20 terminal within the service area, notifying
retransmission information indicating the
information requested by the retransmission request
with respect to each of the wireless terminals
within the service area from the information
25 distribution apparatus, and retransmitting the
information requested by the retransmission request
from the information distribution apparatus at a
predetermined timing; and

(c) making no retransmission request for the
30 information from each of the wireless terminals if
the retransmission information is received by each
of the wireless terminals before the predetermined
timing, so that each of the wireless terminals
receives the information retransmitted from the
35 information distribution apparatus at the
predetermined timing.

2. The retransmission control method for the multicast information distribution service as claimed in claim 1, further comprising the step of:

(d) intensively managing in the information distribution apparatus retransmission requests for the same information made with respect to the same multicast information distribution service until the predetermined timing, and retransmitting from the information distribution apparatus information related to intensively managed retransmission requests at the predetermined timing.

15

3. The retransmission control method for the multicast information distribution service as claimed in claim 1, further comprising the steps of:

(d) including information related to the predetermined timing at which the information requested by the retransmission request is retransmitted in the retransmission information, and notifying each of the wireless terminals within the service area from the information distribution apparatus information related to a transmission channel and a transmission timing for notifying the retransmission information and information related to a transmission channel for retransmitting the information requested by the retransmission request; and

(e) receiving the retransmission information by each of the wireless terminals within the service area based on the information which is received from the information distribution apparatus and is related to the transmission channel and the transmission timing for notifying the retransmission information, and receiving the information

retransmitted from the information distribution apparatus based on the information related to the transmission channel for retransmitting the information and the information related to the
5 predetermined timing included in the retransmission information which are received from the information distribution apparatus.

10

4. The retransmission control method for the multicast information distribution service as claimed in claim 1, further comprising the step of:
15 (d) managing the information requested by the retransmission request in categories according to a predetermined rule, and managing timings for retransmitting the information for each of the categories, in the information distribution
20 apparatus.

25 5. The retransmission control method for the multicast information distribution service as claimed in claim 1, further comprising the step of:
(d) controlling an upper limit value of a number of retransmissions of the information
30 requested by the retransmission request depending on the multicast information which is distributed from the information distribution apparatus.

35

6. A retransmission control system for a

5 a wireless region, comprising:

10 the information which requires retransmission is
generated;

15 respect to the information distribution apparatus at
the timing determined by said timing determination
means;

20 for managing retransmission information indicating
the information requested by the retransmission
request after receiving the retransmission request
for the information from an arbitrary wireless
terminal within the service area; and

25 second retransmission control means, in the
information distribution apparatus, for transmitting
information related to the retransmission request
indicated by the retransmission information to each
wireless terminal within the service area at a
30 predetermined timing,

wherein each wireless terminal makes no retransmission request for the information by the first retransmission control means if the retransmission information is received before the timing determined by said timing determination means, so that each wireless terminal receives the information retransmitted from the information

5

distribution information managing means, in the
10 information distribution apparatus, for intensively
managing retransmission requests for the same
information made with respect to the same multicast
information distribution service until the
predetermined timing,

20

information which is related to the predetermined timing at which the information requested by the retransmission request is retransmitted, is included in the retransmission information.

said information distribution apparatus notifies each of the wireless terminals within the service area information related to a transmission channel and a transmission timing for notifying the retransmission information and information related to a transmission channel for retransmitting the

information requested by the retransmission request,
by the second retransmission control means, and

5 said first retransmission control means in each
wireless terminal receives the retransmission
10 information based on the information which is
received from the information distribution apparatus
and is related to the transmission channel and the
transmission timing for notifying the retransmission
information, and receives the information
15 retransmitted from the information distribution
apparatus based on the information related to the
transmission channel for retransmitting the
information and the information related to the
predetermined timing included in the retransmission
20 information which are received from the information
distribution apparatus.

20

9. The retransmission control system for
the multicast information distribution service as
claimed in claim 6, further comprising:

25 managing means, in the information distribution
apparatus, for managing the information requested by
the retransmission request in categories according
to a predetermined rule, and managing timings for
retransmitting the information for each of the
categories.

30

10. The retransmission control system for
35 the multicast information distribution service as
claimed in claim 6, further comprising:

retransmission control information managing

means, in the information distribution apparatus,
for managing an upper limit value of a number of
retransmissions of the information requested by the
retransmission request depending on the multicast
5 information which is distributed from the
information distribution apparatus.

10

11. A retransmission control apparatus
which is provided in an information distribution
apparatus which distributes multicast information
with respect to a plurality of wireless terminals
15 within a service area via a wireless region and
controls retransmission of information, comprising:

retransmission information transmission control
means for notifying retransmission information
indicating information requested by a retransmission
20 request with respect to each of the wireless
terminals within the service area after receiving
the retransmission request from an arbitrary
wireless terminal within the service area; and

retransmission control means for transmitting
25 the information requested by the retransmission
request and indicated by the retransmission
information at a predetermined timing, so that each
of the wireless terminals determines whether or not
to make a retransmission request for the information
30 by referring to the retransmission information
notified by said retransmission information
transmission control means when information which
requires retransmission is generated.

35

12. The retransmission control apparatus as claimed in claim 11, further comprising:

5 distribution information managing means for intensively managing retransmission requests for the same information with respect to the same multicast information distribution service until the predetermined timing is reached,

10 said retransmission control means retransmitting information related to the retransmission requests intensively managed by said distribution information managing means at the predetermined timing.

15

13. The retransmission control apparatus as claimed in claim 11, wherein:

20 information which is related to the predetermined timing at which the retransmission of the information requested by the retransmission request is made, is included in the retransmission information,

25 the retransmission control means notifies each of the wireless terminals within the service area information related to a transmission channel and a transmission timing for notifying the retransmission information and information related to a transmission channel for retransmitting the
30 information requested by the retransmission request, so that each of the wireless terminals within the service area receives the information which is retransmitted, based on the information included in the retransmission information and the information
35 which is notified by said retransmission control means.

10

20

15

20

25

30

35

said retransmission control means making no

retransmission request for the information if the
retransmission information is received before the
timing determined by said timing determination means,
so as to receive the information retransmitted from
5 the information distribution apparatus at the
predetermined timing.

10

17. The wireless terminal as claimed in
claim 16, wherein:

information which is related to the
predetermined timing at which the information
15 requested by the retransmission request is
retransmitted, is included in the retransmission
information, and

said retransmission control means receives the
retransmission information based on the information
20 which is received from the information distribution
apparatus and is related to the transmission channel
and the transmission timing for notifying the
retransmission information, and receives the
information retransmitted from the information
25 distribution apparatus based on the information
related to the transmission channel for
retransmitting the information and the information
related to the predetermined timing included in the
retransmission information which are received from
30 the information distribution apparatus.

35

18. A wireless base station for
distributing multicast information with respect to a
plurality of wireless terminals within a service

area, comprising:

notifying means for notifying retransmission information which indicates that predetermined information is requested by a retransmission request
5 to each of the wireless terminals within the service area, in response to the retransmission request from an arbitrary wireless terminal within the service area.

10

19. The wireless base station as claimed in claim 18, further comprising:

15 retransmitting means for retransmitting the predetermined information requested by the retransmission request to each of the wireless terminals within the service area, at a timing which can be set arbitrarily.

20

20. The wireless base station as claimed
25 in claim 19, wherein said retransmitting means copes with one retransmission of the predetermined information with respect to a plurality of retransmission requests which request the predetermined information, if the retransmission
30 request requesting the predetermined information is received from one or more wireless terminals within the service area before the predetermined information is retransmitted to each of the wireless terminals within the service area.

35

21. A wireless terminal which is usable within an arbitrary service area, comprising:

retransmission request means for making a retransmission request with respect to a wireless
5 base station when predetermined information which requires retransmission is generated; and

control means for discontinuing transmission of the retransmission request for the predetermined information from said retransmission request means
10 when notified of retransmission information which indicates that a retransmission request for the predetermined information is made from another wireless terminal within the arbitrary service area at a timing before said retransmission request means
15 makes the retransmission request.
